FIG. 4

Figure 1 consists of 12 histograms arranged in two rows of six. The top row is labeled '1000' and the bottom row is labeled '100'. Each histogram shows the frequency of the number of non-zero elements in the vector of the first 1000 iterations of the algorithm. The x-axis for all histograms is 'Number of non-zero elements' ranging from 0 to 1000. The y-axis is 'Frequency' ranging from 0 to 100. The distributions are roughly bell-shaped and centered around 500.
